Chapter 1

The AMORE++ package

1.1 Introduction

Here you will find the documentation of the C++ component of the AMORE++ R package. The AMORE++ package is a new version of the publicly available AMORE package for neural network training and simulation under R

1.2 Motivation

Since the release of the previous version of the AMORE many things have changed in the R programming world. The advent of the Reference Classes and of packages like Rcpp, inline and RUnit compel us to write a better version of the package in order to provide a more useful framework for neural network training and simulation.

1.3 Road Map

This project is currently very active and the development team intends to provide a beta version as soon as this summer (2011)

Chapter 2

Todo List

Member Neuron::vecCon restore vecCon<Con> listCon;

Member vecCon::getFromId() initialize result with as many elements as "this".

Chapter 3

Class Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Con 11
Neuron 19
vecAMORE< T > 22
vecAMORE< Con > 22
    vecCon 25

Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Con (A class to handle the information needed to describe an input connection) 11
Neuron (A class to handle the information contained in a general Neuron) . . 19
vecAMORE< T > 22
vecCon (A vector of connections) 25

Chapter 5

File Index

5.1 File List

Here is a list of all files with brief descriptions:

pkg/AMORE/src/AMORE.h 29
pkg/AMORE/src/Con.cpp 30
pkg/AMORE/src/Con.h 31
pkg/AMORE/src/Neuron.cpp 31
pkg/AMORE/src/Neuron.h 33
pkg/AMORE/src/vecAMORE.cpp 33
pkg/AMORE/src/vecAMORE.h 34
pkg/AMORE/src/vecCon.cpp 34
pkg/AMORE/src/vecCon.h 34

Chapter 6

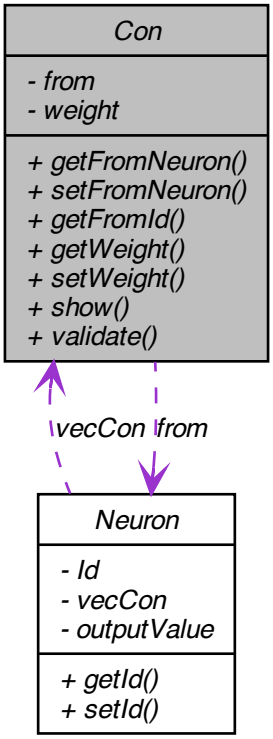
Class Documentation

6.1 Con Class Reference

A class to handle the information needed to describe an input connection.

`#include <Con.h>`

Collaboration diagram for Con:



Public Member Functions

- Neuron * getFromNeuron ()

  from field accessor.
- void setFromNeuron (Neuron *f)

  from field accessor.
- int getFromId ()

  A getter of the Id of the Neuron pointed by the from field.
- double getWeight ()

  weight field accessor.
- void setWeight (double w)

  weight field accessor.
- bool show ()

Pretty print of the Con information.

- bool validate ()

  Object validator.

Private Attributes

- Neuron * from

  A pointer to the Neuron used as input during simulation or training.

- double weight

  A double variable that contains the weight of the connection.

6.1.1 Detailed Description

A class to handle the information needed to describe an input connection.

The Con class provides a simple class for a connection described by a pair of values: a pointer to the Neuron used as the from field and the weight used to propagate the value of that Neuron object.

Definition at line 16 of file Con.h.

6.1.2 Member Function Documentation

6.1.2.1 int Con::getFromId ( )

A getter of the Id of the Neuron pointed by the from field.

This method gets the Id of the Neuron referred to by the from field

Returns

The value of the Id (an integer).

```
//================
//Usage example:
//================
      Con myCon;
      Neuron MyNeuron;
      MyNeuron.setId(16);
      myCon.setFromNeuron(&MyNeuron);
      int result= myCon.getFromId();
```

After execution of the code shown above, MyNeuron::Id is set to the integer value 16 and, thus, result is equal to 16.

See also

getFromNeuron, setFromNeuron and the unit test files, e.g., runit.Cpp.Con.R, for further examples.

Definition at line 73 of file Con.cpp.

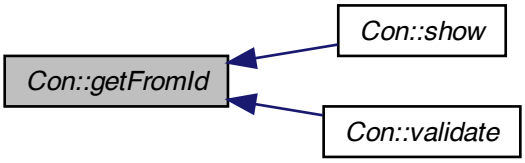
References from, and Neuron::getId().

Referenced by show(), and validate().

```
                    {
        return(from->getId() );
}
```

Here is the call graph for this function:

Here is the caller graph for this function:



6.1.2.2 Neuron * Con::getFromNeuron ( )

from field accessor.

This method allows access to the address stored in the private from field (a pointer to a Neuron object).*

Returns

A pointer to the Neuron object referred to by the from field.

```
//================
```

```
//Usage example:
//================
      Con myCon;
      Neuron MyNeuron;
      Neuron * ptNeuron;
      MyNeuron.setId(1);
      myCon.setFromNeuron(&MyNeuron);
      ptNeuron = myCon.getFromNeuron();
      int result= ptNeuron->getId();
```

After execution of the code shown above, ptNeuron is pointing at MyNeuron and, thus, result is equal to 1.

See also

getFromId and the unit test files, e.g., runit.Cpp.Con.R, for further examples.

Definition at line 37 of file Con.cpp.

References from.

```
                                                                {
      return(from);
}
```

6.1.2.3 double Con::getWeight ( )

weight field accessor.

This method allows access to the value stored in the private field weight

Returns

The value of weight (double)

```
//================
//Usage example:
//================
      Con myCon;
      Neuron MyNeuron;
      MyNeuron.setId(16);
      myCon.setFromNeuron(&MyNeuron);
      myCon.setWeight(12.4);
      double result1= myCon.getWeight();
      myCon.setWeight(2.2);
      double result2= myCon.getWeight();
```

After execution of the code shown above, result1 is set to the double value 12.4 and result2 is set to the double value 2.2.

See also

setWeight and the unit test files, e.g., runit.Cpp.Con.R, for further examples.

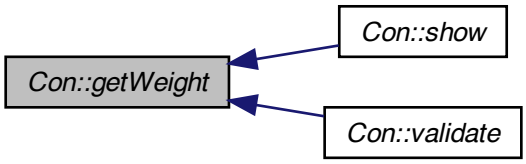
Definition at line 103 of file Con.cpp.

References weight.

Referenced by show(), and validate().

```
                        {
        return(weight);
}
```

Here is the caller graph for this function:



6.1.2.4 void Con::setFromNeuron (Neuron * f)

from field accessor.

This method sets the value of the from field with the address used as parameter.

Parameters

f	A pointer to the neuron that is to be inserted in the from field.

See also

getFromNeuron and getFromId contain usage examples. For further examples see the unit test files, e.g., runit.Cpp.Con.R

Definition at line 48 of file Con.cpp.

References from.

```
                                                {
        from = f;
}
```

6.1.2.5 void Con::setWeight (double *w*)

weight field accessor.

This method sets the value of the weight field.

Parameters

w	The new value (double) to be set in the weight field.

```
//================
//Usage example:
//================
      Con myCon;
      Neuron n;
      n.setId(16);
      myCon.setFromNeuron(&n);
      myCon.setWeight(12.4);
      myCon.show();
```

After execution of the code shown above, the output at the R terminal would show:

```
 FROM=16 WEIGHT=12.4
```

See also

getWeight and the unit test files (e.g. runit.Cpp.Con.R)

Definition at line 134 of file Con.cpp.

References weight.

```
                                    {
      weight = w;
}
```

6.1.2.6 bool Con::show ( )

Pretty print of the Con information.

This method outputs in the R terminal the contents of the Con fields.

Returns

true in case everything works without throwing an exception

See also

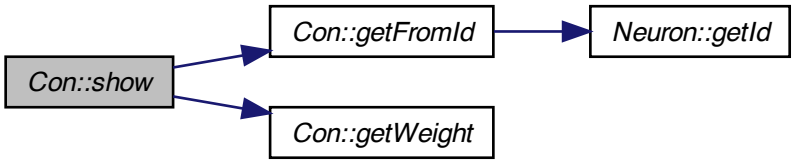
setWeight and the unit test files, e.g., runit.Cpp.Con.R, for usage examples.

Definition at line 146 of file Con.cpp.

References getFromId(), and getWeight().

```
        {
    Rprintf("From:\t %d \t Weight= \t %lf \n", getFromId() , getWeight());
    return(true);
}
```

Here is the call graph for this function:



6.1.2.7 bool Con::validate ( )

Object validator.

This method checks the object for internal coherence. A try / catch mechanism exits normal execution and returns control to the R terminal in case the contents of the Con object are identified as corrupted.

Returns

true in case the checks are Ok.

Exceptions

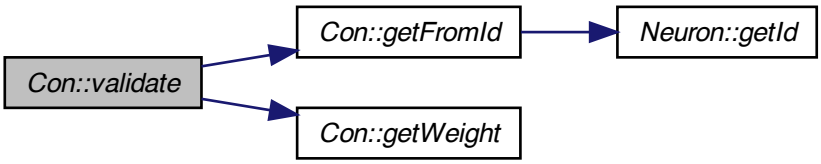
An	std::range error if weight or from are not finite.

Definition at line 160 of file Con.cpp.

References getFromId(), and getWeight().

```
            {
    BEGIN_RCPP
    if (! R_FINITE(getWeight()) )           throw std::range_error("weight is
   not finite.");
    if (getFromId() == NA_INTEGER )         throw std::range_error("fromId is
   not finite.");
    return(true);
    END_RCPP
};
```

Here is the call graph for this function:



6.1.3 Member Data Documentation

6.1.3.1 Neuron* Con::from [private]

A pointer to the Neuron used as input during simulation or training.

The from field contains the address of the Neuron whose output will be used as input by the Neuron containing the Con object.

Definition at line 21 of file Con.h.

Referenced by getFromId(), getFromNeuron(), and setFromNeuron().

6.1.3.2 double Con::weight [private]

A double variable that contains the weight of the connection.

The weight field contains the factor by which the output value of the Neuron addressed by the from field is multiplied during simulation or training.

Definition at line 26 of file Con.h.

Referenced by getWeight(), and setWeight().

The documentation for this class was generated from the following files:

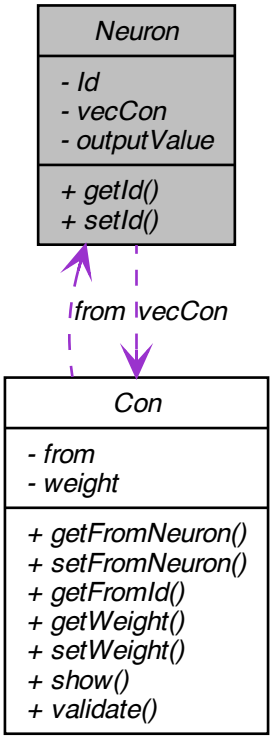
- pkg/AMORE/src/Con.h
- pkg/AMORE/src/Con.cpp

6.2 Neuron Class Reference

A class to handle the information contained in a general Neuron.

`#include <Neuron.h>`

Collaboration diagram for Neuron:



Public Member Functions

- int getId ()
- void setId (int id)

Private Attributes

- int Id

  An integer variable with the Neuron Id.
- Con vecCon

  A vector of input connections.
- double outputValue

6.2.1 Detailed Description

A class to handle the information contained in a general Neuron.

A general class for neurons. The MLPneuron and RBFneuron classes will specialize this general class

Definition at line 16 of file Neuron.h.

6.2.2 Member Function Documentation

6.2.2.1 int Neuron::getId ( )

Definition at line 15 of file Neuron.cpp.

References Id.

Referenced by Con::getFromId().

```
                {
        return Id;
}
```

Here is the caller graph for this function:

6.2.2.2 void Neuron::setId (int *id*)

Definition at line 19 of file Neuron.cpp.

References Id.

```
                        {
        Id=id;
}
```

6.2.3 Member Data Documentation

6.2.3.1 int Neuron::Id [private]

An integer variable with the Neuron Id.

The Neuron Id provides a name to the neuron. This value is not expected to be used neither during simulation nor training but it provides an easy reference for human readers.

Definition at line 21 of file Neuron.h.

Referenced by getId(), and setId().

6.2.3.2 double Neuron::outputValue [private]

Definition at line 30 of file Neuron.h.

6.2.3.3 Con Neuron::vecCon [private]

A vector of input connections.

Todo

restore vecCon<Con> listCon;

Definition at line 29 of file Neuron.h.

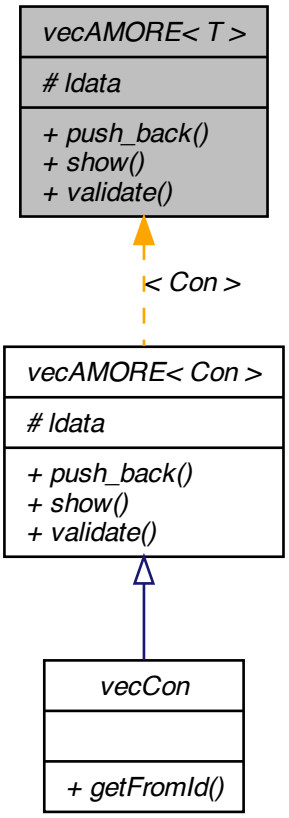
The documentation for this class was generated from the following files:

- pkg/AMORE/src/Neuron.h
- pkg/AMORE/src/Neuron.cpp

6.3 vecAMORE< T > Class Template Reference

`#include <vecAMORE.h>`

Inheritance diagram for vecAMORE< T >:



Public Member Functions

- void push_back (T element)
- bool show ()
- bool validate ()

Protected Attributes

- std::vector< T > ldata

6.3.1 Detailed Description

template<typename T>class vecAMORE< T >

Definition at line 11 of file vecAMORE.h.

6.3.2 Member Function Documentation

6.3.2.1 template<typename T> void vecAMORE< T >::push_back (T *element*)

Definition at line 14 of file vecAMORE.cpp.

```
                                                                {
        this->ldata.push_back(element);
};
```

6.3.2.2 template<typename T > bool vecAMORE< T >::show ( )

Definition at line 19 of file vecAMORE.cpp.

```
                                                {
//      for_each(ldata.begin(), ldata.end(), showCon );
        typename std::vector<T>::iterator itr;
        for(itr = ldata.begin();   itr != ldata.end();   itr++) {
                        itr->show();
        }
        return true;
};
```

6.3.2.3 template<typename T > bool vecAMORE< T >::validate ( )

Definition at line 29 of file vecAMORE.cpp.

```
                                                        {
// for_each(ldata.begin(), ldata.end(), validateCon);
        typename std::vector<T>::iterator itr;
                for(itr = ldata.begin();   itr != ldata.end();   itr++) {
                                itr->validate();
                }
                return true;
};
```

6.3.3 Member Data Documentation

6.3.3.1 template<typename T> std::vector<T> vecAMORE< T >::ldata [protected]

Definition at line 13 of file vecAMORE.h.

The documentation for this class was generated from the following files:

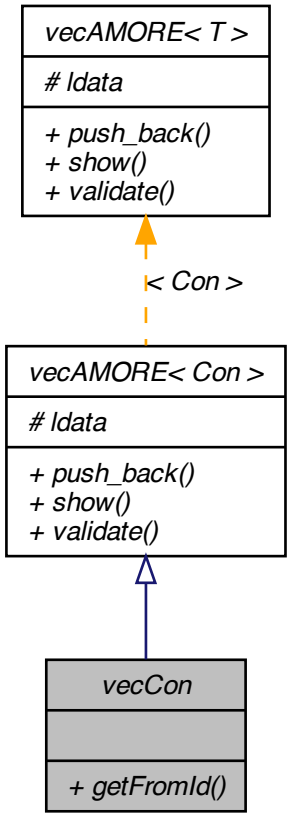
- pkg/AMORE/src/vecAMORE.h
- pkg/AMORE/src/vecAMORE.cpp

6.4 vecCon Class Reference

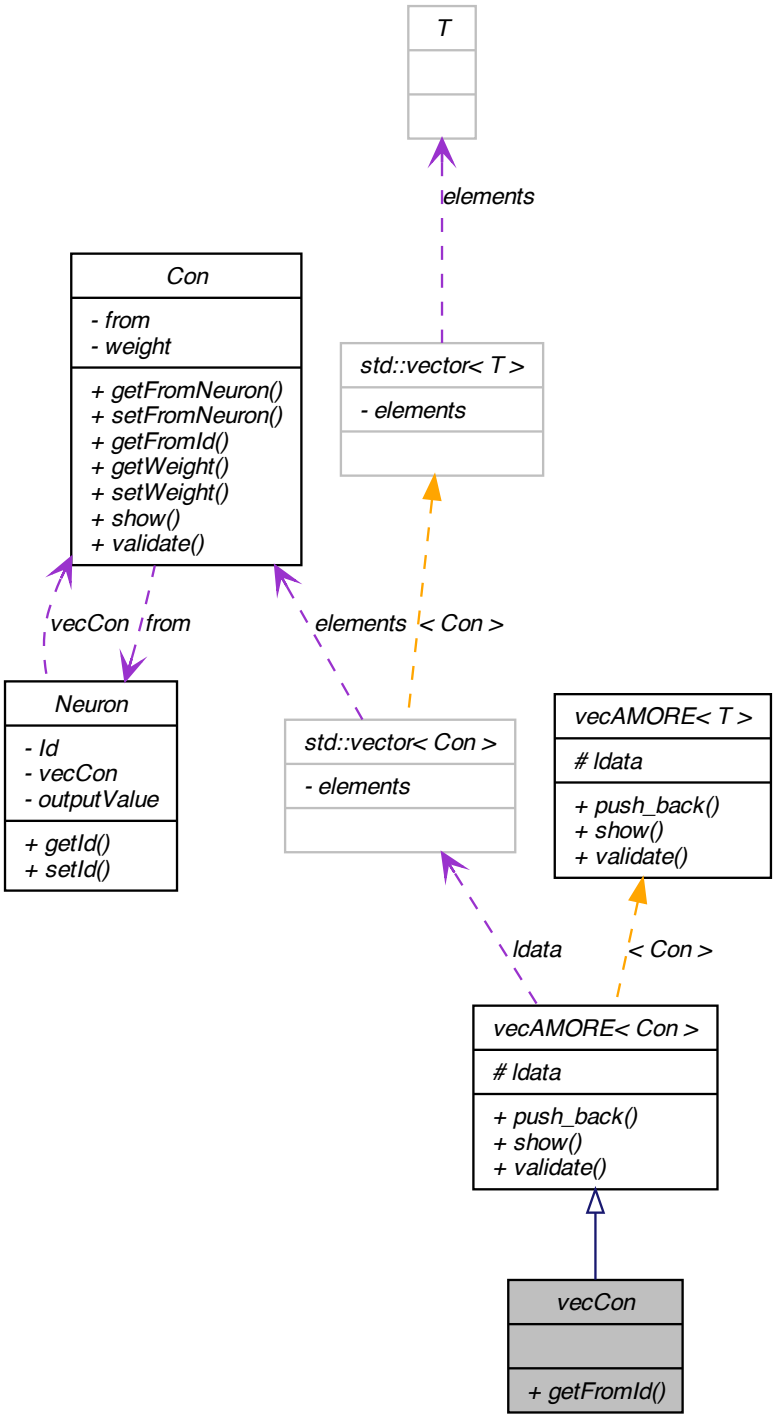
A vector of connections.

`#include <vecCon.h>`

Inheritance diagram for vecCon:



Collaboration diagram for vecCon:



Public Member Functions

- std::vector< int > getFromId ()

  Getter of the Id values of the vector of Cons.

6.4.1 Detailed Description

A vector of connections.

The vecCon class provides a simple class for a vector of connections. It's named after the R equivalent Reference Class.

Definition at line 17 of file vecCon.h.

6.4.2 Member Function Documentation

6.4.2.1 std::vector< int > vecCon::getFromId ( )

Getter of the Id values of the vector of Cons.

This function returns the Id's of the neurons referred to by the vector of Cons.

Todo

initialize result with as many elements as "this".

Definition at line 17 of file vecCon.cpp.

References vecAMORE< Con >::ldata.

```
                                    {

        std::vector<int> result;
        std::vector<Con>::iterator itr;

        for(itr = ldata.begin();   itr != ldata.end();   itr++) {
                        result.push_back(itr->getFromId());
        }
        return result;
}
```

The documentation for this class was generated from the following files:

- pkg/AMORE/src/vecCon.h
- pkg/AMORE/src/vecCon.cpp
