## Chapter 1

# The AMORE++ package

### 1.1 Introduction

Here you will find the documentation of the C++ component of the AMORE++ R package. The AMORE++ package is a new version of the publicly available AMORE package for neural network training and simulation under R

### 1.2 Motivation

Since the release of the previous version of the AMORE many things have changed in the R programming world. The advent of the Reference Classes and of packages like Rcpp, inline and RUnit compel us to write a better version of the package in order to provide a more useful framework for neural network training and simulation.

### 1.3 Road Map

This project is currently very active and the development team intends to provide a beta version as soon as this summer (2011)

## Chapter 2

# Class Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

CompareId . . . . .	9
Con . . . . .	10
Container< T > . . . . .	18
Container< Con > . . . . .	18
VecCon . . . . .	38
Container< Neuron > . . . . .	18
vecNeuron . . . . .	64
vecMLPneuron . . . . .	61
Neuron . . . . .	30

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">CompareId</a>	9
<a href="#">Con</a> (A class to handle the information needed to describe an input connection )	10
<a href="#">Container&lt; T &gt;</a>	18
<a href="#">Neuron</a> (A class to handle the information contained in a general <a href="#">Neuron</a> )	30
<a href="#">VecCon</a> (A vector of connections )	38
<a href="#">vecMLPneuron</a> (A vector of connections )	61
<a href="#">vecNeuron</a> (A vector of neurons )	64

## Chapter 4

# File Index

### 4.1 File List

Here is a list of all files with brief descriptions:

pkg/AMORE/src/ <a href="#">AMORE.h</a> . . . . .	69
pkg/AMORE/src/ <a href="#">Con.cpp</a> . . . . .	71
pkg/AMORE/src/ <a href="#">Con.h</a> . . . . .	72
pkg/AMORE/src/ <a href="#">Container.cpp</a> . . . . .	73
pkg/AMORE/src/ <a href="#">Container.h</a> . . . . .	73
pkg/AMORE/src/ <a href="#">Neuron.cpp</a> . . . . .	73
pkg/AMORE/src/ <a href="#">Neuron.h</a> . . . . .	75
pkg/AMORE/src/ <a href="#">VecCon.cpp</a> . . . . .	75
pkg/AMORE/src/ <a href="#">VecCon.h</a> . . . . .	76
pkg/AMORE/src/ <a href="#">VecMLPneuron.h</a> . . . . .	76
pkg/AMORE/src/ <a href="#">VecNeuron.h</a> . . . . .	76

## Chapter 5

# Class Documentation

### 5.1 CompareId Struct Reference

#### Public Member Functions

- bool `operator()` (const `ConPtr` `a`, const `ConPtr` `b`)
- bool `operator()` (const `ConPtr` `a`, const int `b`)
- bool `operator()` (const int `a`, const `ConPtr` `b`)
- bool `operator()` (const int `a`, const int `b`)

#### 5.1.1 Detailed Description

Definition at line 369 of file `VecCon.cpp`.

#### 5.1.2 Member Function Documentation

##### 5.1.2.1 `bool CompareId::operator() ( const ConPtr a, const ConPtr b )` `[inline]`

Definition at line 371 of file `VecCon.cpp`.

```
        {  
            return a->getId() < b->getId();  
        };
```

##### 5.1.2.2 `bool CompareId::operator() ( const int a, const int b )` `[inline]`

Definition at line 383 of file `VecCon.cpp`.

```
        {  
            return a < b;  
        };
```

### 5.1.2.3 `bool CompareId::operator() ( const int a, const ConPtr b )` `[inline]`

Definition at line 379 of file VecCon.cpp.

```

{
    return a < b->getId();
};

```

### 5.1.2.4 `bool CompareId::operator() ( const ConPtr a, const int b )` `[inline]`

Definition at line 375 of file VecCon.cpp.

```

{
    return a->getId() < b ;
};

```

The documentation for this struct was generated from the following file:

- [pkg/AMORE/src/VecCon.cpp](#)

## 5.2 Con Class Reference

A class to handle the information needed to describe an input connection.

```
#include <Con.h>
```

### Public Member Functions

- [Con](#) ()  
*Default Constructor.*
- [Con](#) ([NeuronPtr](#) f)  
*Constructor.*
- [Con](#) ([NeuronPtr](#) f, double w)  
*Constructor.*
- [~Con](#) ()  
*Default Destructor.*
- [NeuronPtr](#) [getFrom](#) ()  
*from field accessor.*
- void [setFrom](#) ([NeuronPtr](#) f)  
*from field accessor.*
- int [getId](#) ()  
*A getter of the Id of the [Neuron](#) pointed by the from field.*
- double [getWeight](#) ()  
*weight field accessor.*

- void `setWeight` (double w)  
*weight field accessor.*
- bool `show` ()  
*Pretty print of the `Con` information.*
- bool `validate` ()  
*Object validator.*

### Private Attributes

- `NeuronWeakPtr from`  
*A smart pointer to the `Neuron` used as input during simulation or training.*
- double `weight`  
*A double variable that contains the weight of the connection.*

#### 5.2.1 Detailed Description

A class to handle the information needed to describe an input connection.

The `Con` class provides a simple class for a connection described by a pair of values: a pointer to a `Neuron` object used as the `from` field and the `weight` used to propagate the value of that `Neuron` object.

Definition at line 16 of file `Con.h`.

#### 5.2.2 Constructor & Destructor Documentation

##### 5.2.2.1 `Con::Con ( )`

Default Constructor.

Definition at line 18 of file `Con.cpp`.

```
        : weight(0), from() {  
};
```

##### 5.2.2.2 `Con::Con ( NeuronPtr f )`

Constructor.

Definition at line 36 of file `Con.cpp`.

```
: from(f), weight(0) {};
```

### 5.2.2.3 Con::Con ( NeuronPtr f, double w )

Constructor.

Definition at line 28 of file Con.cpp.

```
: from(f), weight(w) {};
```

### 5.2.2.4 Con::~Con ( )

Default Destructor.

Definition at line 41 of file Con.cpp.

```
{};
```

## 5.2.3 Member Function Documentation

### 5.2.3.1 NeuronPtr Con::getFrom ( )

from field accessor.

This method allows access to the address stored in the private [from](#) field (a pointer to a [Neuron](#) object).\*

#### Returns

A pointer to the [Neuron](#) object referred to by the [from](#) field.

```
//=====
//Usage example:
//=====
// Data set up
NeuronPtr ptShNeuron ( new Neuron(1) );           // Neuron
Id is set 1
ConPtr ptShCon( new Con(ptShNeuron) );           // from p
oints to ptShNeuron and weight is set to 0
// Test
ptShNeuron = ptShCon->getFrom() ;
int result = ptShNeuron->getId();

// Now, result is equal to 1.
```

#### See also

[getId](#) and the unit test files, e.g., `runit.Cpp.Con.R`, for further examples.

Definition at line 65 of file Con.cpp.

References from.

```
{
    return(from.lock());
}
```

## 5.2.3.2 int Con::getId ( )

A getter of the Id of the [Neuron](#) pointed by the from field.

This method gets the Id of the [Neuron](#) referred to by the [from](#) field

**Returns**

The value of the Id (an integer).

```
//=====
//Usage example:
//=====
// Data set up
NeuronPtr ptShNeuron ( new Neuron(16) );           // Neuron
Id is set to 16
ConPtr ptShCon( new Con(ptShNeuron) );             // from p
oints to ptShNeuron and weight is set to 0
// Test
int result = ptShCon->getId();

// Now, result is equal to 16.
```

**See also**

[getFrom](#), [setFrom](#) and the unit test files, e.g., `runit.Cpp.Con.R`, for further examples.

Definition at line 117 of file `Con.cpp`.

References from.

Referenced by `show()`, and `validate()`.

```
{
if (from.use_count() !=0 ){
    NeuronPtr ptNeuron(from);
    return( ptNeuron->getId() );
} else {
    return(NA_INTEGER);
}
}
```

Here is the caller graph for this function:

### 5.2.3.3 double Con::getWeight ( )

weight field accessor.

This method allows access to the value stored in the private field [weight](#)

#### Returns

The value of [weight](#) (double)

```
//=====
//Usage example:
//=====
// Data set up
std::vector<double> result;
NeuronPtr ptShNeuron ( new Neuron(16) );
/ Neuron Id is set to 16
ConPtr ptShCon( new Con(ptShNeuron, 12.4) ); // from poi
nts to ptShNeuron and weight is set to 12.4
// Test
result.push_back( ptShCon->getWeight() );
ptShCon->setWeight(2.2);
result.push_back( ptShCon->getWeight() );

// Now, result is a numeric vector that contains the values 12.4 and 2.2
.
```

#### See also

[setWeight](#) and the unit test files, e.g., `runit.Cpp.Con.R`, for further examples.

Definition at line 151 of file `Con.cpp`.

References `weight`.

Referenced by `show()`, and `validate()`.

```
    {
        return(weight);
    }
```

Here is the caller graph for this function:

## 5.2.3.4 void Con::setFrom ( NeuronPtr f )

from field accessor.

This method sets the value of the [from](#) field with the address used as parameter.

## Parameters

<a href="#">f</a>	A pointer to the neuron that is to be inserted in the <a href="#">from</a> field.
-------------------	---

```
//=====
//Usage example:
//=====
// Data set up
NeuronPtr ptShNeuron ( new Neuron(1) );           // Neuron
Id is set to 1
ConPtr ptShCon( new Con() );
ptShCon->setFrom( ptShNeuron );

// Test
ptShNeuron = ptShCon->getFrom() ;
int result = ptShNeuron->getId();

// Now, result is equal to 1
```

## See also

[getFrom](#) and [getId](#) contain usage examples. For further examples see the unit test files, e.g., `runit.Cpp.Con.R`

Definition at line 92 of file `Con.cpp`.

References from.

```

{
    from=f;
}
```

## 5.2.3.5 void Con::setWeight ( double w )

weight field accessor.

This method sets the value of the [weight](#) field.

## Parameters

<a href="#">w</a>	The new value (double) to be set in the <a href="#">weight</a> field.
-------------------	---

```
//=====
//Usage example:
//=====
// Data set up
std::vector<double> result;
NeuronPtr ptShNeuron ( new Neuron(16) );           /
/ Neuron Id is set to 16
ConPtr ptShCon( new Con(ptShNeuron, 12.4) ); // from poi
```

```

nts to ptShNeuron and weight is set to 12.4
    result.push_back(ptShCon->getWeight());
// Test
    ptShCon->setWeight(2.2);
    result.push_back(ptShCon->getWeight());

// Now, result is a numeric vector that contains the values 12.4 and 2.2
.

```

**See also**

[getWeight](#) and the unit test files (e.g. runit.Cpp.Con.R)

Definition at line 180 of file Con.cpp.

References [weight](#).

```

{
    weight = w;
}

```

**5.2.3.6 bool Con::show ( )**

Pretty print of the [Con](#) information.

This method outputs in the R terminal the contents of the [Con](#) fields.

**Returns**

true in case everything works without throwing an exception

**See also**

[setWeight](#) and the unit test files, e.g., runit.Cpp.Con.R, for usage examples.

Definition at line 192 of file Con.cpp.

References [getId\(\)](#), and [getWeight\(\)](#).

```

{
    int id=getId();
    if (id==NA_INTEGER) {
        Rprintf("From: NA\t Invalid Connection \n");
    } else {
        Rprintf("From:\t %d \t Weight= \t %lf \n", id , getWeight());
    }
    return(true);
}

```

Here is the call graph for this function:

#### 5.2.3.7 bool Con::validate ( )

Object validator.

This method checks the object for internal coherence. A try / catch mechanism exits normal execution and returns control to the R terminal in case the contents of the [Con](#) object are identified as corrupted.

#### Returns

true in case the checks are Ok.

#### Exceptions

<i>An</i>	std::range error if weight or from are not finite.
-----------	--

Definition at line 211 of file Con.cpp.

References `getId()`, and `getWeight()`.

```

    {
        BEGIN_RCPP
        if (! R_FINITE(getWeight()) )           throw std::range_error("weight is
        not finite.");
        if (getId() == NA_INTEGER )             throw std::range_error("fromId is
        not finite.");
        return(true);
        END_RCPP
    };

```

Here is the call graph for this function:

## 5.2.4 Member Data Documentation

### 5.2.4.1 `NeuronWeakPtr Con::from` [private]

A smart pointer to the [Neuron](#) used as input during simulation or training.

The `from` field contains the address of the [Neuron](#) whose output will be used as input by the [Neuron](#) containing the [Con](#) object.

Definition at line 21 of file `Con.h`.

Referenced by `getFrom()`, `getId()`, and `setFrom()`.

### 5.2.4.2 `double Con::weight` [private]

A double variable that contains the weight of the connection.

The `weight` field contains the factor by which the output value of the [Neuron](#) addressed by the `from` field is multiplied during simulation or training.

Definition at line 26 of file `Con.h`.

Referenced by `getWeight()`, and `setWeight()`.

The documentation for this class was generated from the following files:

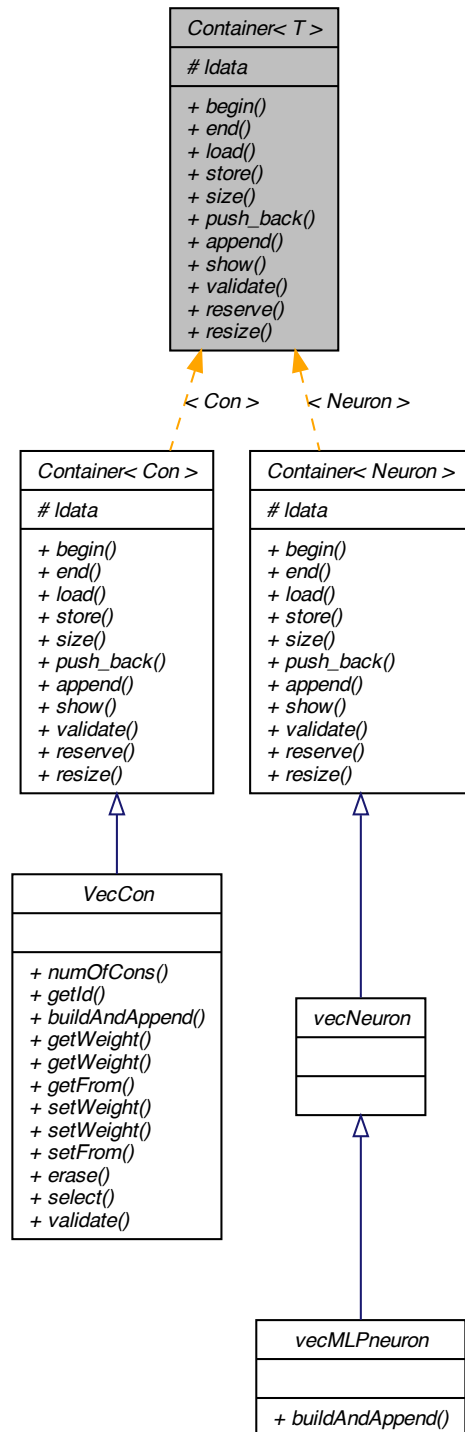

- `pkg/AMORE/src/Con.h`
- `pkg/AMORE/src/Con.cpp`

## 5.3 `Container< T >` Class Template Reference

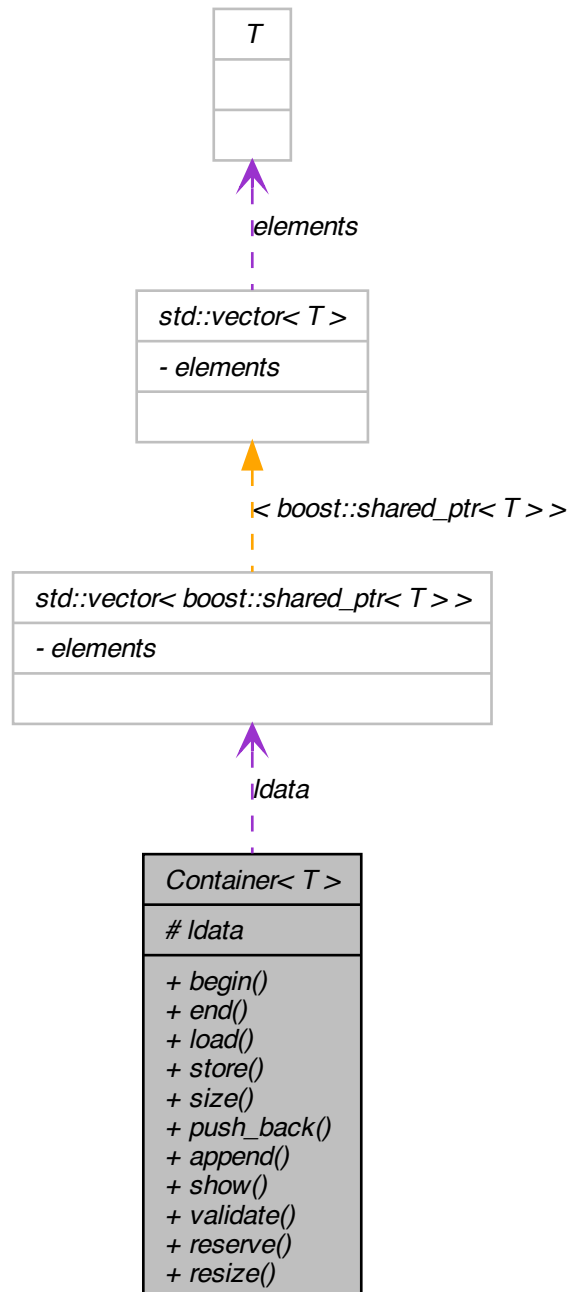

```
#include <Container.h>
```

Inheritance diagram for Container< T >:

Collaboration diagram for `Container< T >`:

## Public Types

- typedef std::vector< boost::shared\_ptr< T > >::iterator iterator
- typedef std::vector< boost::shared\_ptr< T > >::const\_iterator const\_iterator

## Public Member Functions

- iterator begin ()
- iterator end ()
- std::vector< boost::shared\_ptr< T > > load ()  
*ldata field accessor function*
- void store (typename std::vector< boost::shared\_ptr< T > >)  
*ldata field accessor function*
- int size ()  
*Returns the size or length of the vector.*
- void push\_back (boost::shared\_ptr< T > element)  
*Append a shared\_ptr at the end of ldata.*
- void append (Container< T > v)  
*Appends a Container<T> object.*
- bool show ()  
*Pretty print of the Container<T>*
- bool validate ()  
*Object validator.*
- void reserve (int n)
- void resize (int n)

## Protected Attributes

- std::vector< boost::shared\_ptr< T > > ldata

### 5.3.1 Detailed Description

template<typename T>class Container< T >

Definition at line 12 of file Container.h.

### 5.3.2 Member Typedef Documentation

5.3.2.1 template<typename T> typedef std::vector<boost::shared\_ptr<T>  
>::const\_iterator Container< T >::const\_iterator

Definition at line 19 of file Container.h.

### 5.3.2.2 `template<typename T> typedef std::vector<boost::shared_ptr<T> >::iterator Container< T >::iterator`

Definition at line 18 of file Container.h.

## 5.3.3 Member Function Documentation

### 5.3.3.1 `template<typename T> void Container< T >::append ( Container< T > v )`

Appends a Container<T> object.

This method inserts the ldata field of a second object at the end of the ldata field of the calling object.

#### Parameters

v	The Container<T> object to be added to the current one
---	--

#### See also

The unit test files, e.g., `runit.Cpp.Container.R`, for usage examples.

```
//=====
//Usage example:
//=====
// Data set up

std::vector<int> result;
std::vector<ConPtr> vcA, vcB;
ContainerNeuronPtr ptShvNeuron( new
Container<Neuron>() );
ContainerConPtr ptShvConA( new Container<Con>() )
;
ContainerConPtr ptShvConB( new Container<Con>() )
;

ConPtr ptC;
NeuronPtr ptN;
int ids[] = {1, 2, 3, 4, 5, 6};
double weights[] = {1.13, 2.22, 3.33, 5.6, 4.2, 3
.6 };
for (int i=0; i<=5 ; i++) {
/ Let's create a vector with six neurons
ptN.reset( new Neuron( ids[i] ) );
ptShvNeuron->push_back(ptN);
}
for (int i=0; i<=2 ; i++) {
/ A vector with three connections
ptC.reset( new Con( ptShvNeuron->load().a
t(i), weights[i]) );
ptShvConA->push_back(ptC);
}
for (int i=3; i<=5 ; i++) {
/ Another vector with three connections
ptC.reset( new Con( ptShvNeuron->load().a
t(i), weights[i]) );
ptShvConB->push_back(ptC);
}

// Test
ptShvConA->append(*ptShvConB);
```

```

        ptShvConA->validate();
        ptShvConA->show() ;

// After execution of the code above, the output at the R terminal would
display:
//
//   From:      1      Weight=      1.130000
//     From:      2      Weight=      2.220000
//     From:      3      Weight=      3.330000
//     From:      4      Weight=      5.600000
//     From:      5      Weight=      4.200000
//     From:      6      Weight=      3.600000

```

### 5.3.3.4 `template<typename T> std::vector< boost::shared_ptr< T > > Container< T >::load ( )`

ldata field accessor function

This method allows access to the data stored in the [ldata](#) field.

#### Returns

The ldata vector.

```

//=====
//Usage example:
//=====
// Data set up
std::vector<int> result;
  
```

```

std::vector<ConPtr> vcA, vcB;
ContainerNeuronPtr ptShvNeuron( new
Container<Neuron>() );

ContainerConPtr ptShvCon( new Container<Con>() );

ConPtr ptC;
NeuronPtr ptN;
int ids[] = {10, 20, 30};
double weights[] = {1.13, 2.22, 3.33 };
for (int i=0; i<=2 ; i++) {
/ Let's create a vector with three neurons
    ptN.reset( new Neuron( ids[i] ) );
    ptShvNeuron->push_back(ptN);
}
for (int i=0; i<=2 ; i++) {
/ and a vector with three connections
    ptC.reset( new Con( ptShvNeuron->load().a
t(i), weights[i]) );
    vcA.push_back(ptC);
}

// Test
ptShvCon->store(vcA);
vcB = ptShvCon->load();
for (int i=0; i<=2 ; i++) {
/ get Ids. Container does not have getId defined
    result.push_back( vcB.at(i)->getId());
}

// Now, result is an integer vector with values 10, 20, 30.

```

**See also**

[store](#) and the unit test files, e.g., `runit.Cpp.Container.R`, for usage examples.

Definition at line 217 of file `Container.cpp`.

```

return ldata;
};

```

### 5.3.3.5 `template<typename T> void Container< T >::push_back ( boost::shared_ptr< T > TsharedPtr )`

Append a `shared_ptr` at the end of `ldata`.

Implements `push_back` for the [Container](#) class

**Parameters**

<i>TsharedPtr</i>	A <code>shared_ptr</code> pointer to be inserted at the end of <code>ldata</code>
-------------------	---

```

//=====
//Usage example:
//=====
// Data set up
Neuron N1, N2, N3;
Container<Con> MyVecCon;

```

```

        std::vector<ConPtr> vc;
        std::vector<int> result;
        N1.setId(10);
        N2.setId(20);
        N3.setId(30);

        // Test
        ConPtr ptCon( new Con(&N1, 1.13) );      // Create new Con
and initialize ptCon
        MyVecCon.push_back(ptCon);              /
/ push_back
        ptCon.reset( new Con(&N2, 2.22) );      // create
new Con and assign to ptCon
        MyVecCon.push_back(ptCon);              /
/ push_back
        ptCon.reset( new Con(&N3, 3.33) );      // create
new Con and assign to ptCon
        MyVecCon.push_back(ptCon);              /
/ push_back

        vc = MyVecCon.load();

        result.push_back(vc.at(0)->getId());
        result.push_back(vc.at(1)->getId());
        result.push_back(vc.at(2)->getId());
        // After execution of this code, result contains a numeric vector with va
lues 10, 20 and 30.

```

```

{
    ldata.resize(n);
}

```

## 5.3.3.8 template&lt;typename T&gt; bool Container&lt; T &gt;::show ( )

Pretty print of the Container<T>

This method outputs in the R terminal the contents of [Container::ldata](#).

**Returns**

true in case everything works without throwing an exception

\*

```
//=====
//Usage example:
//=====
// Data set up
ContainerNeuronPtr ptShvNeuron( new
Container<Neuron>() );
ContainerConPtr ptShvCon( new Container<Con>() );
ConPtr ptC;
NeuronPtr ptN;
int ids[]= {10, 20, 30};
double weights[] = {1.13, 2.22, 3.33 };

for (int i=0; i<=2 ; i++) {
/ Let's create a vector with three neurons
ptN.reset( new Neuron( ids[i] ) );
ptShvNeuron->push_back(ptN);
}

for (int i=0; i<=2 ; i++) {
/ and a vector with three connections
ptC.reset( new Con( ptShvNeuron->load().at(i), weights[i]) );
ptShvCon->push_back(ptC);
}

// Test
ptShvCon->show() ;

// The output at the R terminal would display:
//
//      # From: 10      Weight=      1.130000
//      # From: 20      Weight=      2.220000
//      # From: 30      Weight=      3.330000
//
```

// This is equivalent to:
// for( auto x : ldata) { x.show(); }
// Waiting for C++0x
```

```

        foreach (typename boost::shared_ptr<T> itr, *this){
            itr->show();
        }
        return true;
    };

```

Here is the caller graph for this function:

#### 5.3.3.9 `template<typename T> int Container< T >::size ( )`

Returns the size or length of the vector.

This method returns the size of the vector. In the classes derived from `Container<T>` this is aliased as `numOfCons`, `numOfNeurons` and `numOfLayers`. The unit test files, e.g., `runit.Cpp.Container.R`, for usage examples.

Definition at line 240 of file `Container.cpp`.

Referenced by `Container< T >::append()`.

```

        {
            return ldata.size() ;
        }
    };

```

Here is the caller graph for this function:

**5.3.3.10** `template<typename T> void Container< T >::store ( typename std::vector< boost::shared_ptr< T > > v )`

ldata field accessor function

This method sets the value of the data stored in the [ldata](#) field.

#### Parameters

<code>v</code>	The vector of smart pointers to be stored in the ldata field
----------------	--

#### See also

[load](#) and the unit test files, e.g., `runit.Cpp.Container.R`, for usage examples.

Definition at line 229 of file `Container.cpp`.

```
{
    ldata=v;
};
```

**5.3.3.11** `template<typename T> bool Container< T >::validate ( )`

Object validator.

This method checks the object for internal coherence. This method calls the `validate` method for each element in `ldata`,

#### See also

The unit test files, e.g., `runit.Cpp.Container.R`, for usage examples.

Reimplemented in [VecCon](#).

Definition at line 112 of file `Container.cpp`.

```
{
    foreach (typename boost::shared_ptr<T> itr, *this){
        itr->validate();
    }
    return true;
};
```

### 5.5.1 Detailed Description

A vector of connections.

The `VecCon` class provides a simple class for a vector of connections. It's named after the R equivalent Reference Class.

Definition at line 17 of file `VecCon.h`.

### 5.5.2 Member Function Documentation

#### 5.5.2.1 bool VecCon::buildAndAppend ( std::vector< NeuronPtr > vFrom, std::vector< double > vWeight )

Builds `Con` objects and appends them to ldata.

This function provides a convenient way of populating a `VecCon` object by building and appending `Con` objects to ldata.

**Parameters**

<i>FROM</i>	A vector of smart pointers to the neurons to be used in the <a href="#">Con::from</a> fields
<i>WEIGHT</i>	A vector of values to be set in the <a href="#">Con::weight</a> fields

```
//=====
//Usage example:
//=====
// Data set up
std::vector<int> result;
VecCon MyVecCon;
std::vector<NeuronPtr> vNeuron;
std::vector<double> vWeight;

// Test
NeuronPtr ptNeuron( new Neuron(11) );
vNeuron.push_back(ptNeuron);
ptNeuron.reset( new Neuron(22) );
vNeuron.push_back(ptNeuron);
ptNeuron.reset( new Neuron(33) );
vNeuron.push_back(ptNeuron);

vWeight.push_back(12.3);
vWeight.push_back(1.2);
vWeight.push_back(2.1);

MyVecCon.buildAndAppend(vNeuron, vWeight);

result=MyVecCon.getId();

// Now result is a vector that contains the values 11, 22 and 32.
```

**See also**

[append](#) and the unit test files, e.g. `runit.Cpp.VecCon.R`, for further examples.

Definition at line 134 of file `VecCon.cpp`.

References `Container< Con >::push_back()`, `Container< Con >::reserve()`, and `Container< Con >::size()`.

```
{
BEGIN_RCPP
if (vFrom.empty()) { throw std::range_error("[VecCon::append]: Error, vFrom is empty"); }
if (vFrom.size() != vWeight.size() ) { throw std::range_error("[VecCon::buildAndAppend]: Error, vFrom.size() != vWeight.size()"); }
reserve(size() + vFrom.size());
ConPtr ptCon;
std::vector<double>::iterator itrWeight = vWeight.begin();

foreach (NeuronPtr itrFrom, vFrom){
    ptCon.reset( new Con( itrFrom, *itrWeight) );
    push_back(ptCon);
    itrWeight++;
}
return true;
END_RCPP
}
```

Here is the call graph for this function:

#### 5.5.2.2 void VecCon::erase ( std::vector< int > vFrom )

Erase the specified elements from the vecCom object.

Provides a convenient way of removing some [Con](#) objects from the ldata field of the [VecCon](#) object.

##### Parameters

<b>vFrom</b>	An std::vector<int> with the lds of the connections to remove.
--------------	--

```

//=====
//Usage example:
//=====

// Data set up
std::vector<int> result;
std::vector<NeuronPtr> vNeuron;
VecConPtr          ptShvCon( new VecCon() );
VecConPtr vErased;
ConPtr  ptC;
NeuronPtr ptN;
int ids[] = {11, 10, 9, 3, 4, 5, 6, 7, 8, 2, 1};
std::vector<double> vWeight;
vWeight.push_back(11.32);
vWeight.push_back(1.26);
vWeight.push_back(2.14);
vWeight.push_back(3.16);
vWeight.push_back(4.14);
vWeight.push_back(5.19);
vWeight.push_back(6.18);
vWeight.push_back(7.16);
vWeight.push_back(8.14);
vWeight.push_back(9.12);
vWeight.push_back(10.31);
  
```

```

        for (int i=0; i<vWeight.size() ; i++) {
/ Let's create a vector with three neurons
            ptN.reset( new Neuron( ids[i] ) );
            vNeuron.push_back(ptN);
        }
        ptShvCon->buildAndAppend(vNeuron, vWeight);

// Test

        std::vector<int> toRemove;
        toRemove.push_back(1);
        toRemove.push_back(3);
        toRemove.push_back(5);
        toRemove.push_back(7);

        ptShvCon->erase(toRemove);
        ptShvCon->show();
        result=ptShvCon->getId();

// The output at the R terminal would display :
//
// From:      2      Weight=      9.120000
// From:      4      Weight=      4.140000
// From:      6      Weight=      6.180000
// From:      8      Weight=      8.140000
// From:      9      Weight=      2.140000
// From:     10      Weight=      1.260000
// From:     11      Weight=     11.320000

```

### See also

References `Container< Con >::begin()`, `Container< Con >::end()`, and `Container< Con >::resize()`.

```

        {
            std::vector<ConPtr>::iterator itr;
            sort (begin(), end(), CompareId());
            sort (vFrom.begin(), vFrom.end());
            itr=set_difference (begin(), end(), vFrom.begin(), vFrom.end(), begin(),
            CompareId());
            resize(itr-begin());
        }

```

Here is the call graph for this function:

### 5.5.2.3 `std::vector< NeuronPtr > VecCon::getFrom ( )`

Getter of the from field of the [Con](#) objects related to [VecCon](#).

This function provides a convenient way of getting the values of the weight field of those [Con](#) object pointed to by the smart pointer stored in the [VecCon](#) object.

#### Returns

An `std::vector<NeuronPtr>` with the pointer to the incoming neurons.

```

//=====
//Usage example:
//=====
// Data set up
std::vector<double> result;
int ids[] = {1, 2, 3};
double weights[] = {12.3, 1.2, 2.1 };
VecCon MyVecCon;
std::vector<NeuronPtr> vNeuron;
std::vector<double> vWeight;
NeuronPtr ptNeuron;

    for (int i=0; i<=2; i++) {
        ptNeuron.reset( new Neuron(ids[i]) );
        vNeuron.push_back(ptNeuron);
        vWeight.push_back(weights[i]);
    }
MyVecCon.buildAndAppend(vNeuron, vWeight);
// Test
vNeuron=MyVecCon.getFrom();
for (int i=0; i<=2; i++) {
    result.push_back(vNeuron.at(i)->getId());
}

// Now result is a vector that contains the values 1, 2 and 3 .

```

**See also**

[getId](#) and the unit test files, e.g. `runit.Cpp.VecCon.R`, for further examples.

Definition at line 298 of file `VecCon.cpp`.

References `numOfCons()`.

Referenced by `Neuron::getFrom()`.

```

{
    std::vector<NeuronPtr> result;
    result.reserve(numOfCons());
    foreach(ConPtr itr, *this){
        result.push_back( itr->getFrom() );
    }
    return result;
}

```

Here is the call graph for this function:

Here is the caller graph for this function:

#### 5.5.2.4 `std::vector< int > VecCon::getId ( )`

Getter of the Id values of the vector of Cons.

This function returns the Id's of the neurons referred to by the vector of Cons.

**Returns**

An `std::vector<int>` that contains the Ids

```

//=====
//Usage example:
//=====
// Data set up
    Neuron N1, N2, N3;
    VecCon MyVecCon;
    std::vector<int> result;

    N1.setId(10);
    N2.setId(20);
    N3.setId(30);

    ConPtr ptCon( new Con(&N1, 1.13) );    // Create new Con
and initialize ptCon
    MyVecCon.push_back(ptCon);              /
/ push_back

#### 5.5.2.5 `std::vector< double > VecCon::getWeight ( )`

Getter of the weight field of the [Con](#) objects related to [VecCon](#).

This function provides a convenient way of getting the values of the weight field of those [Con](#) object pointed to by the smart pointer stored in the [VecCon](#) object.

#### Returns

A numeric (double) vector with the weights

```

//=====
//Usage example:
//=====
// Data set up
std::vector<double> result;
VecCon MyVecCon;
std::vector<NeuronPtr> vNeuron;
std::vector<double> vWeight;

// Test
NeuronPtr ptNeuron( new Neuron(11) );
vNeuron.push_back( ptNeuron );
ptNeuron.reset( new Neuron(22) );
  
```

```

vNeuron.push_back(ptNeuron);
ptNeuron.reset( new Neuron(33) );
vNeuron.push_back(ptNeuron);

vWeight.push_back(12.3);
vWeight.push_back(1.2);
vWeight.push_back(2.1);

MyVecCon.buildAndAppend(vNeuron, vWeight);

result=MyVecCon.getWeight();

// Now result is a vector that contains the values 12.3, 1.2 and 2.1 .

```

### 5.5.2.6 `std::vector< double > VecCon::getWeight ( std::vector< int > vFrom )`

Getter of the weights of the specified elements from the vecCom object.

Provides a convenient way of getting the weights of some [Con](#) objects from the ldata field of the [VecCon](#) object.

#### Parameters

<i>vFrom</i>	An <code>std::vector&lt;int&gt;</code> with the lds of the connections to select
--------------	--

#### Returns

An `std::vector<double>` with the weights of the selected connections

```
//=====
//Usage example:
//=====

// Data set up

    std::vector<double> result;
    std::vector<NeuronPtr> vNeuron;
    VecConPtr      ptShvCon( new VecCon() );
    ConPtr  ptC;
    NeuronPtr ptN;
    int ids[]= {11, 10, 9, 3, 4, 5, 6, 7, 8, 2, 1};
    double weights[]={11.32, 1.26, 2.14, 3.16, 4.14, 5.19, 6.18, 7.16
, 8.14, 9.12, 10.31};
    std::vector<double> vWeight;
    for (int i=0; i<11; i++) {
        vWeight.push_back(weights[i]);
    }
    for (int i=0; i<vWeight.size() ; i++) {
        /
// Let's create a vector with three neurons
        ptN.reset( new Neuron( ids[i] ) );
        vNeuron.push_back(ptN);
    }
    ptShvCon->buildAndAppend(vNeuron, vWeight);

// Test
    std::vector<int> toSelect;
    toSelect.push_back(1);
    toSelect.push_back(3);
    toSelect.push_back(5);
    toSelect.push_back(7);

    result=ptShvCon->getWeight(toSelect);

// Now, result is a numeric vector with the values 10.31, 3.16, 5.19 and 7.16.
```

}

```

Here is the call graph for this function:

#### 5.5.2.7 int VecCon::numOfCons ( )

Size of the [VecCon](#) object.

This function returns the size of the [VecCon](#) object, that is to say, the number of [Con](#) objects it contains.

#### Returns

The size of the vector

```

//=====
//Usage example:
//=====
// Data set up

Container<Neuron>( ) ;

std::vector<int> result;
std::vector<ConPtr> vcA, vcB;
ContainerNeuronPtr ptShvNeuron( new

VecConPtr ptShvCon( new VecCon() );
ConPtr ptC;
NeuronPtr ptN;
int ids[] = {10, 20, 30};
double weights[] = {1.13, 2.22, 3.33 };
for (int i=0; i<=2 ; i++) {
    /
    / Let's create a vector with three neurons
    ptN.reset( new Neuron( ids[i] ) );
    ptShvNeuron->push_back(ptN);
}

// Test
for (int i=0; i<=2 ; i++) {
    /
    / and a vector with three connections
    result.push_back(ptShvCon->numOfCons());
    /
}

```

```

/ Append numOfCons to result, create new Con and push_back into MyVecCon
ptC.reset( new Con( ptShvNeuron->load().a
t(i), weights[i]) );
ptShvCon->push_back(ptC);
}

// Now, result contains a numeric vector with values 0, 1, 2, and 3.

```

### 5.5.2.8 VecConPtr VecCon::select ( std::vector< int > vFrom )

Selects the specified elements from the vecCom object.

Provides a convenient way of selecting some [Con](#) objects from the ldata field of the [VecCon](#) object.

#### Parameters

<b>vFrom</b>	An std::vector<int> with the lds of the connections to select.
--------------	--

```
//=====
//Usage example:
//=====

// Data set up
std::vector<int> result;
std::vector<NeuronPtr> vNeuron;
VecConPtr      ptShvCon( new VecCon() );
ConPtr  ptC;
NeuronPtr ptN;
int ids[]= {11, 10, 9, 3, 4, 5, 6, 7, 8, 2, 1};
double weights[]={11.32, 1.26, 2.14, 3.16, 4.14, 5.19, 6.18, 7.16
, 8.14, 9.12, 10.31};
std::vector<double> vWeight;
for (int i=0; i<11; i++) {
    vWeight.push_back(weights[i]);
}
for (int i=0; i<vWeight.size() ; i++) {
